

## Precision Apparatus Granite Machine Base

Precision Apparatus granite machine base is processed by selecting high-quality black granite as the production material. UNPARALLELED has the best black granite in the world. Granite is the core of our manufacturing, be it for laser processing, milling processing, for drilling work, grinding processing or electric discharge machining. Because of its physical characteristics, granite offers significant advantages that cannot be achieved with cast iron/steel or synthetic stone. In combination with linear technology, it is possible to achieve degrees of precision that were unthinkable in the past. Further advantages of granite include high vibration suppression, limited expansion coefficient, low level of thermal conductivity and a specific weight close to aluminum.
